-1- FUNCTION: GRANULINS HAVE POSSIBLE CYTOKINE-LIKE ACTIVITY. THEY MAY
PLAY A ROLLE IN INTELAMMATION, WOUND REPAIR, AND TISSUE REMODELING.
-1- TISSUE SPECIFICITY: UBLOUITOUS.
-1- PTM: GRANULINS ARE DISULFIDE BRIDGED.

Reprod. Dev. 34:233-243(1993).

-I- FUNCTION: GRANULINS HAVE POSSIBLE CYTOKINE-LIKE ACTIVITY. THEY MAY PLAY A ROLE IN INFLAMMATION, WOUND REPAIR, AND TISSUE REMODELING.

-I- TISSUE SPECIFICITY: UBIQUIFIDE BRICGED.

-!- FUNCTION: Interferes with the binding of transcription factors

-!- FUNCTION: Interferes with the binding of transcription factors

HIF-la and STAT2 to p300/CBP (By similarity).

-!- SUBCHINIT: Binds to the p300/CBP CHI region (By similarity).

-!- SUBCHINITAR LOCATION: Nuclear.

-!- ALTERNATIVE PRODUCTS: 4 isoforms; 1 (shown here), 2, 3 and 4; are produced by alternative splicing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SEQUENCE FROM N.A. (ISOFORM 3).

II. Sequence determination of the entire genome and assignment of potential protein-coding regions."; DNR Res. 3:109-136(1996).
-!- CATALYTIC ACTIVITY: ATP + D-fructose 6-phosphate = ADP + D-fructose 1,6-bisphosphate.
-!- PATHWAY: KEY CONTROL STEP OF GLYCOLYSIS.
-!- PATHWAY: LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: BELONGS TO THE PHOSPHOFRUCTOKINASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Kaneko T., Sato S., Kotani H., Tanaka A., Asamizu E., Nakamura Y., Miyajima N., Hirosawa M., Sugiura M., Sasamoto S., Kimura T., Hosouchi T., Matsuno A., Muraki A., Nakazaki N., Naruo K., Okumura Shimpo S., Takeuchi C., Wada T., Watanabe A., Yamada M., Yasuda M., Tabata S.;

Genome Res. 7:441-456(1997).

-I FUNCTION: MAY BE INVOLVED IN ACTIVELY TRANSPORTING PHOSPHATE

INTO CELLS VIA NA+ COTANSPORT (BY SIMILARITY).

-I SUBCELLULAR LOCATION: Integral membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Transport; Symport; Sodium transport; Transmembrane; Glycoprotein;

THIS METABOLITE HAS PROFOCUED EFFECTS ON VERTEBRATE DEVELOPMENT. RETINOIC ACID IS A MORPHOGEN AND IS A POWERFUL TERATOGEN. THIS RECEPTOR CONTROLS CELLS FUNCTIONS BY DIRECTLY REGULATING GENE EXPRESSION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Chatterjee K.K.; rand characterization of the retinoic acid receptor-alpha gene in the Japanese pufferfish, F. rubripes."; Gene 236:315-323(1999).

                                                                                                      -1- FUNCTION: TRIID IS A MULTIMERIC PROTEIN COMPLEX THAT PLAYS A CENTRAL ROLL IN MEDIATING PROMOTER RESPONSES TO VARIOUS ACTIVATORS AND REPRESSORS. BINDS TIGHTLY TO TAFIL-250 AND ALSO DIRECTLY INTERACTS WITH TAFIL-40.

-1- SUBMINT: FRIID IS COMPOSED OF TATA BINDING PROTEIN (TBP) AND A NUMBER OF TBP-ASSOCIATED FACTORS (TAFS).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MEDLINE-20057165; PubMed-10591208; Dunham I., Hunt A.R., Collins J.E., Brusklewich R., Beare D.M., Clamp M., Smink L.J., Ainscough R., Aimelda J.P., Babage A.K., Bagguley C., Balley J., Barlow K.F., Bates K.N., Beasley O.P., Bayguley C.P., Blakey S.E., Bridgeman A.M., Buck D., Burgess J., Burtli W.D., Button J., Carder C., Carter N.P., Chen Y., Clark G., Clept S.M., Cobley V.E., Cole C.G., Collier R.E., Connor R., Conroy D., Corby N.R., Collie G.J., Cox A.V., Davis J.J., Dawson E., Dhami P.D., Dockree C., Dodsworth S.J., Durbin R.M., Ellington A.G., Bvans K.L., Fey J.M., Fleming K., French L., Garner A.A., Gilbert J.G., R., Goward M.E., Graffen D.V., Criffiths M.N.D., Hall C., Hall R.E., Hall-Tamlyn G., Heathcott R.W., Ho S., Holmes S.,
